INVERTER PULSE TIG WELDING MACHINE

The **WRT 2000P DC TIG Welding Machine** is a state of an art design base on the Inverter Technology, offers excellent welding characteristic, quality and reliability. It is compact, single phase supply and highly portable, hence offers great convenience to professional welder. By incorporating the Inverter Technology, it has been possible to produce a small light weight DC Power Source with few internal component giving high reliability combined with low maintenance cost.

The **WRT 2000P DC TIG Welding Machine** is designed with inbuilt HF responding to fast arc ignition suitable for tag welding as well as continuous welding process. The simplicity designed on the front panel with minimum adjustment knobs is user friendly to every welder. Current adjustment, Crater, Pulse, Gas Post Flow and the touch switch latching mode selection, provide ALL necessary functions that a TIG welder needs. Power Lamp and Gas Lamp give visual status of the machine.

Specifications :-

MODEL	WRT 2000P
Stocks Code	K300/302
Input Voltage	230 V, 50 Hz, 1 Phase
Rated Power	5 KVA
Max O.C.V	110 V
Weld'g Current	5 - 200 A
Crater / Crater Current	5 - 200 A
Pulse Current	5 - 200 A
Rated Duty Cycle	40%
Crater Control System	Pulse / Crater / Repeat
Gas Pre Flow	0.15 sec (Pre-set)
Gas Post Flow	1 - 5 sec
Diameter of (mm)	1.360 ± W200 ± H240
Weight	10.5 KG
